## What's coming up next?

Construction of the \$165 million Goulburn Hospital and Health Service Redevelopment is progressing well, with the final works stage set to get underway this July.

The completion and opening of the new four-storey clinical services building last year marked a major milestone in the project. Current works being undertaken in Goldsmith Street side of the campus are to provide the finishing touches to the clinical services building in the form of the main entry, completing the car parking areas, fitting out the new Northern linkway exhibition space, and repairs to the façade of the original building, which are due for completion in late August 2022

Over the next 12 months, work will continue on-site to deliver improved medical and health services for the Goulburn community. This includes the refurbishment of parts of the old hospital buildings and transferring services into new spaces as part of the Redevelopment. This work is expected to be completed in the second half of 2023.

## Background

The NSW Government is redeveloping the \$165 million Goulburn Hospital and Health Service to deliver a fit-for-purpose facility that will continue to provide high quality healthcare for the Goulburn region to meet the current and future needs of the local communities. In December 2021, a major milestone was reached in the project with the official opening of Goulburn Base Hospital's new clinical services building by Premier Dominic Perrottet, Health Minister Brad Hazzard, and Member for Goulburn, Wendy Tuckerman.

OFFICIAL OPENING OF GOULBURN HOSPITAL'S NEW CLINICAL SERVICES BUILDING

The new facility delivers a major upgrade and consolidation of essential health services at the Goulburn Hospital campus.

With the clinical services building now fully operational, work is set to commence on the final stage of the project.

## What will happen in this stage?

As part of the final stage, the main redevelopment work zone will move to Albert Street (see map).

This stage includes the establishment of a new work site, the demolition of the old maternity and newborn block, and the construction of the new Clinical Training Facility and associated car parking.

Following this work, the West Wing on Albert Street will be demolished to allow for additional car parking and landscaping.

Work will continue off Goldsmith Street to complete the main entry carpark.

GOULBURN HOSPITAL CAMPUS MAP SHOWING FINAL WORKS PROGRAM

## How will the works affect me?

As the main work zone moves to Albert Street, there may be an increase in vehicle traffic in the area. Our team will work to minimise disruption to the area and ensure traffic is minimised during peak school drop-off and pick-up times.

All contractors will be encouraged to make full use of the dedicated contractor car park to keep parking spaces free for residents and the community. Time limited parking will remain in place around the hospital, during this time.

We will continue to keep you updated as the project progresses through this final works stage.

## Take a look inside the new clinical services building.

If you haven't yet visited the new clinical services building here's a few pictures of our team in action.

## Have you heard about the artwork around the hospital?

Many of the new artworks in the new clinical services building including murals and sculptures were created by local artists, photographers, and students. Working with the local community helps to make our hospitals a little more vibrant and welcoming and is an important part of supporting clinical care and wellbeing.

Local First Nations high school students helped to create the artwork on the internal and external staircases, which recognises the Goulburn-Mulwaree region, its people and communities, and the area as a traditional meeting place of many tribes.

Many of the photographs around the lifts and staff stations were taken by the winners of a local photography competition.

## Solar installation

**SOLAR INSTALLATION ON ROOF OF NSW REGIONAL HOSPITAL**

As part of our commitment to support a more sustainable future, the Goulburn Hospital and Health Service Redevelopment will be installing a new solar system on the roof of the new Clinical Services Building.

The nearly 100-kilowatt solar system includes 208 solar panels and once installed, has the potential to produce close to 400 kilowatt-hours per day.

Work on the solar installation is expected to occur between 13 June and 4 July 2022 between the hours of 7.00am and 6.00pm.

All work to install the panels will be carried out on the hospital site and there will be minimal impact on the community.
